capitalize-word-toggle

Here's the code:

```
(defun char-upcasep (letter)
  (eq letter (upcase letter)))

(defun capitalize-word-toggle ()
  (interactive)
  (let ((start
        (car
         (save-excursion
           (backward-word)
           (bounds-of-thing-at-point 'symbol))))))
    (if start
        (save-excursion
          (goto-char start)
          (funcall
           (if (char-upcasep (char-after))
               'downcase-region
               'upcase-region)
           start (1+ start)))
        (capitalize-word -1)))
    (global-set-key (kbd "C-z") 'capitalize-word-toggle))
```

upcase-word-toggle

Here's the code:

```
(defun upcase-word-toggle ()
  (interactive)
  (let ((bounds (bounds-of-thing-at-point 'symbol))
        beg end)
    (regionp
     (if (eq this-command last-command)
         (get this-command 'regionp)
         (put this-command 'regionp nil))))
    (cond
     ((or (region-active-p) regionp)
      (setq beg (region-beginning)
            end (region-end))
      (put this-command 'regionp t))
     (bounds
      (setq beg (car bounds)
            end (cdr bounds)))
     (t
      (setq beg (point)
            end (1+ beg))))
    (save-excursion
     (goto-char (1- beg))
     (and (re-search-forward "[A-Za-z]" end t)
          (funcall (if (char-upcasep (char-before))
                      'downcase-region
                      'upcase-region)
                   beg end))))
    (global-set-key (kbd "C->") 'upcase-word-toggle)
```
